KEYWORDS:

Design; Bio-geometry; Radiesthesia; Universe Forces.

ABSTRACT:

There are many types of energy around us, including natural and artificial ones, the first of the ground energies due to the imbalance happened from the treatment of man with the ground (mines - the bases of huge buildings); the result of the Earth rotation, the result of geological faults, the flow of groundwater or energies resulting from other factors that result in radiations that harm organisms in general. Also we are continuously increasing the amount of carrier waves needed for the wireless technology of modern communication in the earth's atmosphere every day. These electromagnetic waves are thousands of times stronger than the level used in the communication in our body cells. The problem is not the saturation of the earth's atmosphere through quantity, but also a detrimental quality. Even people who avoid using high technology are not immune. No one is immune because these are carrier waves with penetrating properties. our immune systems are continuously trying to correct the distortion in the transfer of inner information in our body; very soon the threshold will be reached when a total collapse of our body defenses will take place. Balancing the activities of daily life, achieving harmony with our inner and outer environments, humanizing modern technology, integrating science and spirits, and discovering the unified scientific reality behind all religions is the work of some science such as Bio Geometry, Bio Design, Radiesthesia, ...ext.

Introduction:

Problem analysis: The global extinction of life on earth two may also would come from nuclear struggle and our carelessness in the direction of our environment, endangering plant and animal life; the ozone gap and international warming inflicting natural disasters everywhere. However, the real plausible danger is one that we are barely conscious lurking simply around the corner. The artificial energies are the end result of using electrical devices so interiors surroundings make humans exposed to exclusive ailments depending on the diploma of electrical air pollution (Nermeen Saad FathallahAhmed, ,2004)

Research Objectives: The strength area of human in and around our physical body such as shades expresses features of the various energies that surrounding us. This new attention of a range of invisible paths of our bodies at the electricity degree making us experience the want to deal with these paths. If the health problems had been induced by means of the trouble of these paths that Invisible energy direct interacts with, this dimension will target the original purpose of these troubles and for that reason will create extraordinarily efficient options working alone or as an aid to Traditional medication which is primarily based on knowledge of forming best paths of the two energy of distinct human physique organs at all ranges of bio signatures and in this experience works as biometric fingerprinting. So that we can via the Resonance Law to restoration the pathways imbalanced in the human body (in the case of disease) to its best paths, if we use designed structure in accordance to these paths outside of the physique resonates between the oscillation waves issued by way of this form and oscillations of the broken organ and recognized Resonance legal guidelines in The physics bug is constant through the most effective and high-quality field of these fingerprints. These necessary fingerprints (ideal direction shapes) have been developed in the shape of jewelry that can be used completely in the body area to perform the balancing method required for special energy paths.

Effects of Contemporary Science:

While contemporary civilization has been often high-quality about reducing a variety of sorts of pollutions we have produced, there is one shape of pollution- electromagnetic area (hereafter “EMF”) - that has

been significantly increasing over time. The typical car, for instance has more than 30 sources of EMF., and an awful lot greater in hybrids -- from the controlling motors in seats, to the window controls, etc. - no longer to mention the phones we place subsequent to our brain through the ear where there is an opening in skull, permitting for multiplied damage to intelligence tissue from that exposure.

We are exposed to quite number sorts of radiation and invisible waves that pollute the environment around us and characterize a chance that would cast off on our immune systems, but totally get rid of all kinds of lifestyles on Earth.

This hidden pollution (not conscious of the five senses) drew an interest to the existence of an extension another for our bodies, at the stage of strength and in which a defect occurs as an end result of these special sorts of pollution. Although we might also now not experience by the direct impact of this pollution on our physical body for a length of time in the structure of Different immunodeficiency diseases ranging from normal ailments such as allergic reactions and types Diseases that are hopeless. It can also show up in the shape of modern intellectual illness between depression and lack of awareness and between acute intellectual illnesses reflected on overall performance Actions (Debah, 2006).

Fig (1) the field of human energy within and around the physical body and the qualities of its energy

How to Realize& Measure Familiar Energy

There is a commonplace cognizance and pastime that grows over time with hassle of the limitations modern-day science and its lack of ability to provide an explanation for many of the phenomena that we see in life. The way present day wondering led to a split in our life view, we apprehend only what is measurable, quantitative as science. Arts, humanities and religion

are considered non-scientific on the foundation that they have a subjective nature. This view is based on the fact that regular science these days does not deal with all the power stages in nature. The phrase “scientific” is applied to the entirety that can be measured quantitatively, ignoring that the inability to measure something is in fact a lack of the chances of our widespread tools. (Aal, 2009)

Nature does now not apprehend our scientific units of measurement, centimeters, inches, volts, etc. are now not in nature, however are the way we are to recognize nature by means of making it quantitative. When nature recognizes quantum it is through its interaction with the “qualitative issue of this quantum”. In nature, for example, each quantity with unique frequencies can be transmitted by way of interplay and can produce positive consequences on other strength systems. The thinking of volume and first-class are truly double aspects of a single coin. It used to be the first to introduce to the Western world the historic Egyptians’ way of linking the musical property with Pythagoras numerical values. Use a easy musical instrument, made of one tight string on a piece of wood, whereby every sound excellent is associated with a sure size on this string. This capability that we have a device in the musical instrument that can convert extent to first-class each musical instrument performs the same conversion.

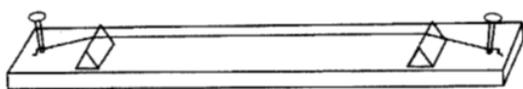

Figure (2) concepts of resonance and octaves with monochord and tuning forks (Gilbert, n.d.)

Measuring Methods with Radiology Sciences Radiesthesia

A Latin phrase skill susceptibility to radiation. This science works to take benefit of the radiation, Human susceptibility to obtain statistics from the tiers of power that cannot be recognized by using our five senses; so it is the science of facts exchanging thru the relationship between subject of human power and the energy fields of the waves round us. Some easy strategies are used as indications to measure microbial interactions between one-of-a-kind strength levels. Radiesthesia has its roots in ancient Egypt where it was once practiced as an correct science. The utilized fields of this science have been characterized as limitless and countless due to the fact this science ex-

amines the relationship between man and all the surrounding areas of power and power in universe. More surprisingly, they discovered that they used geometric shapes as a manual technique to manipulate energy for functional purposes. The Pyramid of Khufu in Giza is a model for the devices of issuing and transmitting engineering energy which invented with the aid of ancient Egyptians. This pyramid has gorgeous properties that have been studied with the aid of thousands of books that are constantly published and motive greater confusion for researchers. Some Paranoid inscriptions describe a crew of people the usage of the pendulum while there are different inscriptions the place the pharaohs’ goddesses carry energy transmitters and these gadgets are in the form of wands. An attempt to gain a deeper understanding of physics via the science of physical radiology is a prerequisite for the development of engineering energy technology devices; therefore, we need to realize that the knowledge of ancient Egyptians used to be primarily based on unique scientific foundations (Ibrahim, 2011). These theories developed by means of the Greek philosophers such as Pythagoras had been initially solely components of the sciences Sacred Geometry, Plato and others in the area of numerology and secret sacred engineering that they have been enlightened in Egypt, however unfortunately, this science has been lost and has no longer been left of them Short sections misunderstood, remained as historical folklore and magic rituals

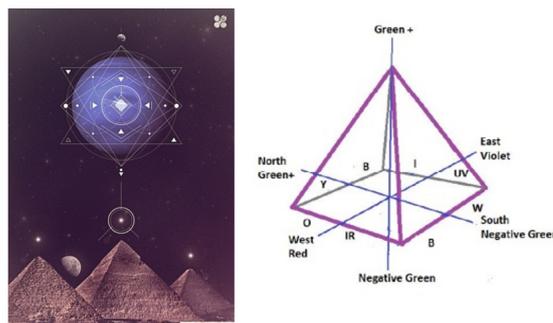

Fig (3) The relation between pyramid and universal power (Gilbert, n.d.)

The use of this kind of application was part of a radiology gadget launched before Mental Radiesthesia used to be applied to the technique used in radiology and the church model to demonstrate the significance of using this science in construction of historical places of worship and laying the foundations for the science of cutting-edge radiology physics .As general, Radiesthesia primarily based on this new kind of physics is

the science of “form energy”, additionally regarded as physical Radiesthesia. plus, Wadj Schumeri and Pilsal discovered that the pharaonic form, called the pendulum, in Europe known as the Egyptian Pendulum radiates a variety of electricity that has the residences of the carriers, making it suitable for communications as lots as the Hz waves are used to lift lengthy distance sound and The Egyptian pendulum is one of the most popular pendulums in Europe, as has been referred to in many books on radiopyschosis. Al-Wadij, one of the most well-known pharaonic devices, is the most famous and used in Europe, as most of the world now has scientific institutes of all branches of radiology, and its purposes range from one side to another.

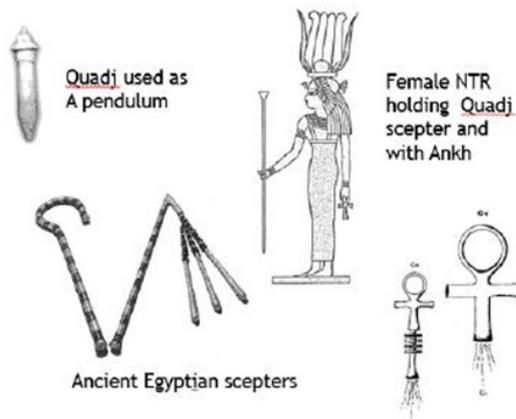

Figure (4) Ancient Egyptian Tools to Emit and Detect Energy Qualities (Jerry Gin, 2015)

Radiology is used as a precise means of measurement and lookup after Bio geometry. In Egypt, the engineering of bio-formatting used to be developed and found by using its scientific basics, which had been unknown from the world for a lengthy time, and it was once known as “harmonic resonance science” to be specialized from other kinds of Radiesthesia that lack the objective scientific factors, then science returns to its value to launch strongly and on scientific base again. Standardized instruments are designed to allow us to convert measurements of quantitative ratios to quality, to measure the first-rate of the impact of the thing, such as electricity, on human energy, considering that man is the most necessary thing in any civilization and civilization is only for the gain of man. (Karim, Ibrahim Ph.D., Dr.Sc, 2011) To understand the difference between perception of shade and the qualitative effect of color on our organic systems, we must be aware that what enters the Genius is vibrations translated into the intelligence statistics bank

to a positive nice that recognize the colorings so; ear hear what color is similar to sound. For example, the translation of the red color into a sound is in the du tone, and so all vibrations are presented visually or audibly or experience in accordance to the characteristic of each sense. When a character is deprived of an experience of his senses, however, he can sense an impact through one of his different senses or from backyard the perception of the senses. For example, human beings with color blindness can nonetheless sense the distinction between hues due to the fact of their special sensitivity that can experience colorings with their fingers and even if their eyes are closed. This is apparent if we be mindful that we apprehend hues by breaking mild angles (with waves Lengths) through a glass leaf. Since the angles are the unit of shapes, they are therefore the translation of hues into shapes.

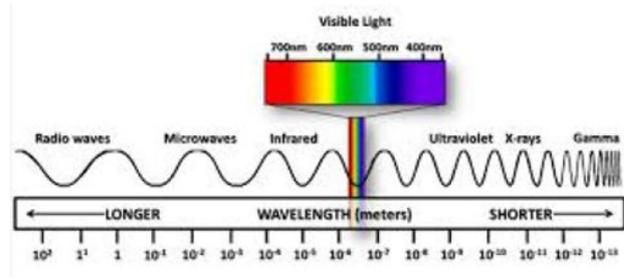

Figure 5. Electromagnetic Spectrum

Therefore we discover that as in colors, sound, smell, texture and style can be translated into types (hence also can be translated into motion and this is every other step further). When there are two power systems in a ringing relationship there is an change of facts between them which makes them in no way return to their initial nation because each of them keeps a phase of the records that changes the machine and keeps them related forever, this is very comparable to statement of quantum physics fascinated in smaller strength considers it a entire universe in itself.

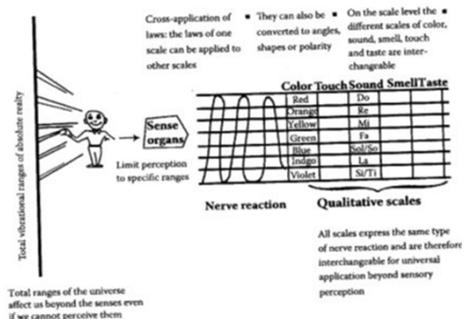

Fig (6) All qualitative measures reflect the same neurotransmitters as they can be exchanged (Karim, 2014)

Level 1: An organ of the experience where a precise two frequency domain is selected from the whole frequency area of the strength current in the absolute truth. Each sensory organ is designed to pick the precise bandwidth that interacts with it.

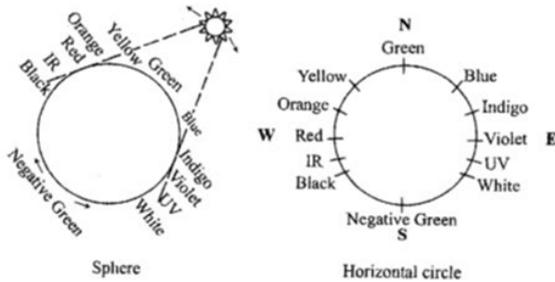

Figure (9) distribution of coloration in radiesthesia (Waleed Ebrahim Hassen , Shaimaa Osama Abdel Hamid, n.d.)

The 2nd level: the facts from the first stage of the interaction is transformed and transmitted in the structure of electrical messages alongside a nerve leading to a place of the brain. At this 2d level, the worried response of special sensory statistics is symmetric: it may also be expanded or lowered for electrical nerve impulses. The nerve does now not transfer color, sound, smell, style or texture. All nerves All of which transmit electrical impulses carrying a coded statistics set in response to the power received from the sensory organ

Level 3: The place where the neural response is assessed in accordance to a particular measure of color, sound, scent and style And texture. Here the same neurotic reaction from the 2nd stage interprets into a special set of measures. At the 0.33 level the translation is summary and objective for all humans due to the fact they all have the equal anatomical structure. At this level, “Electrical Nervous Impulses” are no longer only quantitative measures of the level of expand and decrease in electrical impulses “But also refers to aspects other than extent of a qualitative nature. Level 4: The degree of which means of perception. All sorts of data from exclusive cognitive measures flow into the brain with each different and trade the relationship with the reminiscence factors in our private inventory of ever-expanding data to produce the last form of the perceived reality as we identify it. Sounds, colors, smell and so on. In the fifth level the perceived truth

is reflected and shown outside on the areas This additionally applies to the time and area created with the aid of the reality of our existence and range from that of the time and region of different creatures or other dimensions. In our dreams, for example, time passes at one of a kind speeds and the region follows one of a kind laws from vigilance laws. The thought of time and area for each object varies in accordance to the environment. In physical Radiesthesia, measuring the first-class of reaction at the third level, which is earlier than the stage of clarity of meaning, which is usually colored in our statistics stock. To grow to be an international measure of qualitative measurement. Because everything is energy, power is frequency and frequency is the interplay between the fantastic and terrible poles. But it is easy to exchange the pink shade with the superb pole and the blue or pink shade of the pole Negative, or crimson to specific the extend in electricity and blue than the decline. When we use these measures in an really prevalent way we can enter a world past the limits of quantitative science but in a qualitative way. The qualitative method permits to interact with all stages of power in nature, which encompass physical, biological, sensory, mental and religious degrees in an summary and goal manner that is no longer defined in time and place. (Jerry Gin, 2015)

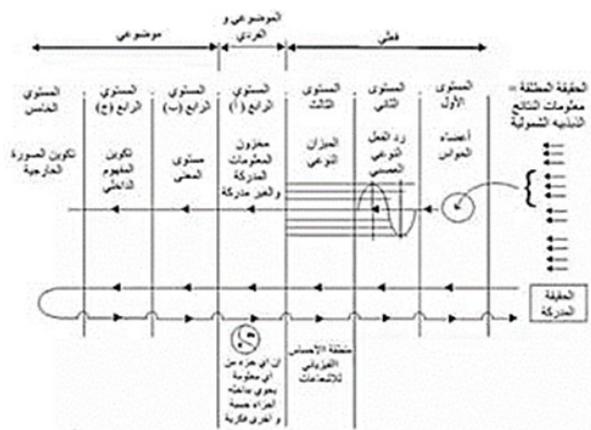

Fig (10) levels of receiving and feeling reality

Strength Balance with the Aid of Bio- Geometry in Design

Bio geometric science has its roots in qualitative physics, no longer the quantity that is based on the relationship between the stability of power and man as it is in the science of radysysticism, thermonics and geophysics, and of course in architecture, arts

and science, which are specialized in architectural applications, which is the predominant aspect in the stability of the environment. But as a frequent science enters into all spheres of life. It can resemble the stone in which the hierarchical shape of modern-day science is completed; this science could not have been reached except sciences of all ages that contributed to its awareness and emergence. A science that cares about strength paths in the earth that will directly have an effect on the human and the major purpose of his health troubles in addition to electrical pollution. For example, human beings do now not experience the factors of salt however experience it as a qualitative impact on the extent of their style Thus, this science is concerned mostly with controlling the rhythm Human with the surrounding environment in which the stress of pollution of all types and the most dangerous electromagnetic pollution to fitness Human .It was and nonetheless is ordinarily committed to the improvement of a new form of architecture that would decorate the human organic machine and provide a new meaning to the concept of “Home “in constructing ,architecture and ornament (karim:, 1997) To improve the energy great of present residences and cancel the doubtlessly hazardous consequences of unchecked energy fields due to the architectural design, arts, furniture layout, electrical wiring and modern-day appliances, especially designed ornamental elements are strategically placed to neutralize bad electricity and add a superb great to it. Bio Geometrical shapes when designed or engraved on jewelry have proven high-quality effects on the body’s strength field, and reduce extensively the practicable fitness hazards caused by way of cellular phones, computers and all different current appliances. The effect of geometrical shapes on human power systems has usually been universally recognized. This awareness gradually disappeared, and our “modern” approach is to consider these ancient forms either as symbolic artwork except function, or attribute them to magical practices. Although the present day development and practices are no longer directly derived from Ancient Egypt, a very advanced know-how in this field is evident when we analyze and use the shapes that they have developed hundreds of years ago.

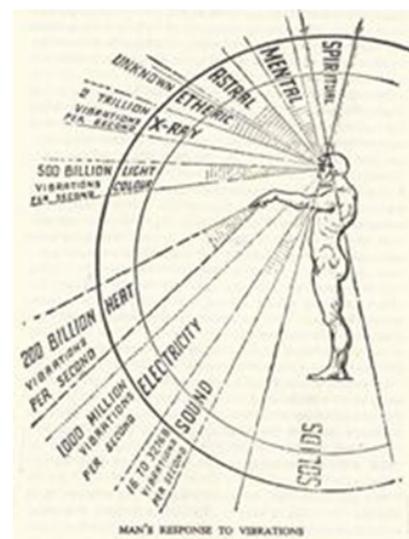

Fig (11) To perform different functions take different energy paths

This is the language of nature around us. Everything that is created has a positive form for the performance of a precise feature and any defect in the form really produces a defect in the overall performance of a function. Bio geometric science seeks to discover the ideal varieties of the paths of the quite a number energies current

in the universe and thus the opportunity of restoring the paths of the energies that are misplaced (which appear in the shape of diseases and other manifestations of the imbalance in nature) to the ideal paths and thus rebalancing the function.

(Methodology) of the Use of Bio Geometry Science:

Bio geometry uses many tools to stability with a frequency and functionally linked to the physical body, which makes the immune device inside the body works greater correctly and gives safety against any dangerous consequences of environmental pollution, visible as electromagnetic fields and radiation. In addition to the geometric shapes makes use of the power of color, sound, movement and different oscillation family members between them, which are also translated into angles and ratios and engineering relations.

Fig(12) man’s response to vibration

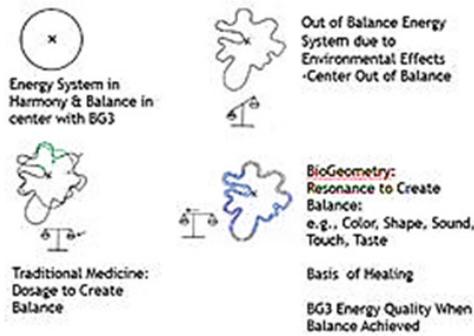

Figure 20 regaining balance two technique with bio geometry

Dr. Krarim created the Hemberg Emitter to regulating two the source of EMF radiations from the telephone tower. The Home Kit with Cubes containing BioGeometry etchings to harmonize EMF was created.

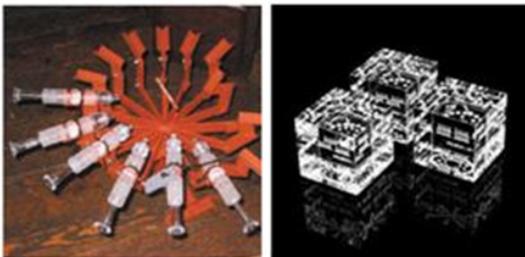

Figure 21 suggests the Hemberg Emitter as properly as the Cubes used in the Home Kit. Figure 22.severity of complaints of electro sensitivity earlier than and after implementation of Bio Geometry units are shown (Ph.D. , 2015)

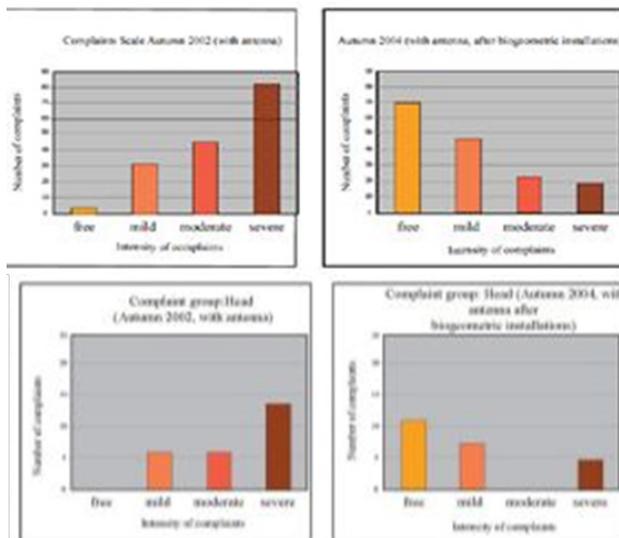

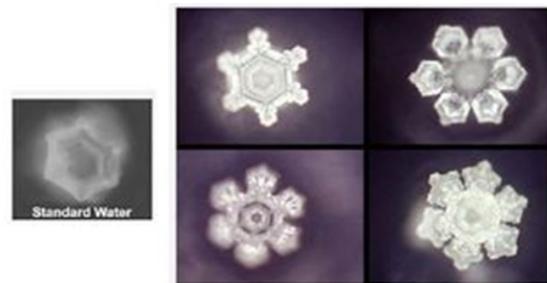

Figure 22. Summary of results on frequency and riskiness of complaints of electro sensitivity before and after implementation of Bio-Geometry gadgets (Jerry Gin, 2015)

Dr. Masaru Emoto, author of The hidden messages from Water, labored with Dr. Karim and his Bio Ge-

ometry Cube in the Home Kit. When the Cube used to be positioned in a room with water, the subtle energy from the Cube resulted in balanced, superbly formed crystals when the water was frozen. In his book, Dr. Emoto confirmed that water impregnated with correct strength high-quality fashioned beautiful, well-balanced hexagonal crystals, while water impregnated with awful strength fantastic produced badly shaped and unbalanced crystals. The crystals in the presence of the Cube showed the water was uncovered to suitable strength qualities. (Jerry Gin, 2015)

Fig(23) Shows photos of water harmonization by cubes (Ibrahim, 2011)

The Swiss village of hemberg suffered each human and animal fitness problems after a powerful Microwave antenna array was once positioned in the core of town. Dr. Karim balanced the electromagnetic air pollution problem for the complete area, leading to such a dramatic improvement in dwelling conditions (and the return of birds and other animals which had fled the area) that he was given the Key to the City by the Mayor and featured on countrywide Swiss news programs. (Anon., n.d.) (Jerry Gin, 2015) According to Karim as inventor of a science, a proper office requires greater than simply relaxed chairs and smooth lights bio geometry can manipulate electricity fields to create an office environment that produces healthy, happy, innovative workers, We can radically change any constructing into an electricity balancing and shielding second skin,” he said. “You can increase the first-rate of lifestyles of the employees. They’ll feel extra energized, extra creative.” Bio geometry isn’t quite there but on spot of the nearby architectural or enterprise community. Karim worked on power adjustment at a Montessori college in Maadi, and he’s constructing his personal re-sort in Ain Sukhna the place the entirety from the furniture to the landscaping will be designed to give an strength boost. “We’re working on all levels,” he said. “It’s a health

spa where the most important endeavor is simply being there.”

Conclusions

imbalance happened from the treatment of man with the ground because of some factors result in radiations that harm organisms in general as result of using electrical devices so interiors surroundings make humans exposed to many diseases depending on the effects of electrical air pollution

humanizing modern technology, integrating science and spirits, and discovering the unified scientific reality behind all religions is the work of some science such as Bio Geometry , bio design , Radiesthesia,.... ext; so we can via the resonance Law to restore the pathways imbalanced in human body (in case of disease) to its best paths.

We can create extraordinarily efficient options working alone or as an aid to Traditional medication which is primarily based on knowledge of forming best paths of the two energies of distinct human physique organs at all ranges of bio signatures ; these signatures work as biometric fingerprinting.

Ancient Egyptians ,fung shui and other historical civilizations had the lead in controlling the energies of the universe through many ways, including the energy of shapes and their relations with the centers and axes of the universe.
