

A NEW TREND TO VERIFY THE VERTICALITY OF THE BUILDING USING E.D.M. MEASUREMENTS

sa Eisa

Abstract

The use of measuring techniques as an integral part of a manufacturing process is a fundamental requirement to reduce rejects and working overtimes that to avoid losses in man power and materials, with high accuracy . The task of this article is to verify the verticality of the buildings and determination of the inclination value by using E.D.M. (distomate) measurements
